- A. You can schedule Publication that contains both Desktop Intelligence and Web Intelligence documents.
- B. You cannot schedule Publication on a recurring basis.
- C. You can test Publication before scheduling.
- D. Scheduling Publications is an example of single-pass refresh bursting as oppose to multi-pass report bursting.

Answer: C,D

Question No : 10 - (Topic 0)

You want department administrators to perform some basic administrative tasks that require them to be able to access the Central Management Console (CMC).

How will you give the department administrators the right to be able to grant access to the CMC to other administrators in their own departments?

- A.** In the Organize Objects area, select Central Management Console, Add the department administrator group(s) and grant them the right to "Edit this object".
- B.** In the Manage BusinessObjects Applications area, select Central Management Console, Add the department administrator group(s) and grant them the right to "Full control".
- C.** In the Manage Settings area, select Central Management Console, Add the department administrator group(s) and grant them the right to "Modify the rights users have to this object".
- D.** In the Manage BusinessObjects Applications area, select Central Management Console, Add the department administrator group(s) and grant them the right to "Modify the rights users have to this object".

Answer: D

Question No : 11 - (Topic 0)

A user who has always scheduled objects for the Marketing department is leaving your company.

Which method should you use in the Central Management Console (CMC) to ensure that all recurring instances owned by this user remain in effect but become owned by the Administrator?

- A.** Disable the departing user then click on the Transfer recurring instances to button and select the Administrator. Click OK.
- B.** Delete the departing user; all recurring instances automatically transfer to the Administrator.
- C.** Open each recurring instance on the object's History tab then click on Schedule for and select Administrator. Ensure that the instance will use the same recurrence pattern and parameter values. Delete the departing user when all instances have been duplicated.
- D.** Download details of all the instances then log on to the CMC as Administrator and schedule them using the same recurrence patterns and parameter values. Delete the departing user when all instances have been duplicated.

Answer: B

Question No : 12 - (Topic 0)

Which statement describes the role of BusinessObjects Enterprise within the Business Objects Business Intelligence (BI) suite of products?

- A. Allows you to analyze and interact with data from both relational and OLAP data sources.
- B. Provides you with an open, scalable platform that supports all of your BI tools and applications.
- C. Provides you with a process for accessing data, formatting it and delivering it as information to various users.
- D. Allows you to integrate, transform and deliver enterprise data from any source.

Answer: B

Question No : 13 - (Topic 0)

Select two true statements from below. (Choose two.)

- A. You cannot copy Calendar objects in CMC > Calendars area of administration.
- B. You can create your own Calendars in BusinessObjects Enterprise; you have to use the pre-build business calendars only.
- C. You can schedule Web Intelligence documents based on an existing calendar.
- D. Calendars can be created in InfoView.

Answer: B,C

Question No : 14 - (Topic 0)

What steps should you follow to make Report A run automatically every day upon the successful completion of Report B?

- A. Working in InfoView, create a new schedule-based event. Schedule Report B to run daily, with events and add the new schedule-based event to the Events to trigger on completion window. Schedule Report A to run daily, with events and add the new schedule-based event to the Events to wait for window.
- B. Working in the Central Management Console, create a new schedule-based event. Schedule Report B to run daily, with events and add the new schedule-based event to the Events to trigger on completion window. Schedule Report A to run daily, with events and add the new schedule-based event to the Events to wait for window.
- C. Working in the Central Management Console, create a new custom event. Schedule

Report A to run daily, with events and add the new custom event to the Events to wait for window. After Report B runs successfully, trigger the custom event in the Central Management Console.

D. Working in InfoView, create a new custom event. Schedule Report A to run daily, with events and add the new custom event to the Events to wait for window. After Report B runs successfully, trigger the custom event in the Central Management Console.

Answer: B

Question No : 15 - (Topic 0)
