

IBM 000-443

IBM 000-443 Db2 Content Manager v8.3

Practice Test

Version 1.1

QUESTION NO: 1

Which of the following best describes the contents of a worklist?

- A. A worklist contains a list of tasks that a particular user needs to complete.
- B. A worklist contains a list of work packages that can be filtered by notify state, suspend state, and owner.
- C. A worklist consists of workbaskets, collections points, and processes.
- D. A worklist contains a list of workbaskets, each of which contains a list of tasks that a particular user needs to complete.

Answer: B

QUESTION NO: 2

In order to delete a document routing definition, which of the following privileges is required?

- A. ClientDelete
- B. ItemDelete
- C. ItemDeletePart
- D. ClientDeleteBasePart

Answer: B

QUESTION NO: 3

To ease maintenance in configuring multiple customer environments (i.e., development, QA, Test), which of the following would be the best approach?

- A. Manually configure each environment.
- B. Replicate the data using the Content Manager replication feature.
- C. Back up and restore one environment several times.
- D. Utilize the schema export/import feature of Content Manager.

Answer: D

QUESTION NO: 4

Which of the following is true regarding the use of the DB2 Content Manager API's and the importing and exporting of metadata via XML?

- A. The Visual Java Beans provide import and export methods for XML data.

- B. Only the Java API's provide the ability to import and export metadata through XML.
- C. The Java API's allow exporting of XML metadata, but only administration data.
- D. The C++ and Java API's provide ways to import and export metadata through XML.

Answer: B

QUESTION NO: 5

During installation, which of the following options must be configured to connect to an LDAP server and retrieve user names and groups into Content Manager?

- A. Base DN and group names
- B. Server name and group attributes
- C. Server name and Base DN
- D. Base DN and minimum number of records to retrieve

Answer: C

QUESTION NO: 6

A developer needs to prototype the integration of DB2 Content Manager with an existing application built on the Microsoft .NET framework. Which of the following related to the integration options is accurate?

- A. The developer will be able to connect directly to Content Manager from the .NET application.
- B. The developer must recompile the .NET application as a Visual C++ 6.0 application.
- C. The developer will need to rewrite the .NET application in Java.
- D. The developer will be able to connect to Content Manager but only through a Java proxy class.

Answer: A

QUESTION NO: 7

An administrator determines that system administration events are not being saved properly. Which of the following is a likely cause?

- A. The ICMSTSYSADMEVENTS table space is full.
- B. The ICMSTITEMEVENTS table is not in the correct schema.
- C. The administrator has specified that events be written to a log file instead of a database table.
- D. DB2 Content Manager does not store system administration events.

Answer: A

QUESTION NO: 8

Which of the following components must be installed to use the text search feature on the Library Server for an Oracle database?

- A. DB2 Net Search Extender
- B. Oracle Enterprise Manager
- C. Oracle Text
- D. DB2 Extreme Text Blade

Answer: C

QUESTION NO: 9

The DB2 Content Manager connector API query language is similar to which of the following?

- A. XPath
- B. Regular expressions
- C. SQL
- D. XQuery

Answer: A

QUESTION NO: 10

In a custom application, item type CustomerAddress contains the customer address, location map, delivery instructions, etc. CustomerAddress is related to many other item types such as PurchaseOrder, Invoice, DeliveryConfirmation, etc. If an item of CustomerAddress is deleted for any reason, corresponding items in PurchaseOrder, Invoice, and DeliveryConfirmation should also be deleted. Which of the following data modeling elements would facilitate this deletion?

- A. Folder
- B. Reference attribute
- C. Outbound link
- D. Child component

Answer: B

QUESTION NO: 11

An insurance company wants to migrate images of insurance policies to an offsite resource manager. Which of the following is required to set up the migration policy?

- A. Specify a remote storage class as the only storage class in the migration policy.
- B. Specify the remote storage class as the final step in the migration policy.
- C. Ensure the step in the migration policy prior to the remote resource manager is a storage class of type Fixed Disk.
- D. Set the retention period for the item type to 'Forever'.

Answer: B

QUESTION NO: 12

While configuring an LDAP Server during installation, the 'Standard LDAP' option is selected as the LDAP server type for an LDAP server in which of the following sets of servers?

- A. Microsoft Windows 2000 Active Directory, Sun Java System Directory Server, and IBM Tivoli Directory Server
- B. IBM Tivoli Directory Server, Microsoft Windows Server 2003 Active Directory, and Lotus Domino Directory Notes Address Book (NAB)
- C. IBM Tivoli Directory Server, Microsoft Windows Server 2003 Active Directory, and Sun Java System Directory Server
- D. IBM Tivoli Directory Server, Lotus Domino Directory Notes Address Book (NAB), and Sun Java System Directory Server

Answer: D

QUESTION NO: 13

In a system with administrative domains enabled, which of the following objects can exist in more than one domain?

- A. Resource Managers
- B. User IDs
- C. Access Control Lists
- D. Collections

Answer: C

QUESTION NO: 14

Content Manager clients (eClient or Client for Windows) can be used to capture and store data and images directly into CM. Which of the following most accurately describes the functionality available through CM clients?

- A. CM Client for Windows - import/scan (local workstation only) - no indexing
eClient - import, index only - no configuration required
- B. CM Client for Windows - scan (local workstation only), index - no import
eClient - no capture functionality (import, index or scan) available
- C. CM Client for Windows - import only, no index or scan functionality available
eClient - import/scan (local workstation only), index - must be configured/enabled
- D. CM Client for Windows - import/scan (local workstation only), indexing
eClient - import, indexing - must be configured/enabled

Answer: D

QUESTION NO: 15

To help identify Content Manager system usage, which of the following may be used to obtain information about search performance over a period of time?

- A. DB2 Query Patroller
- B. DB2 Event Monitor
- C. DB2 Query Optimizer
- D. DB2 Snapshot Monitor

Answer: B

QUESTION NO: 16

A small business of less than 50 people believes the out-of-the-box Windows client will be satisfactory to meet their requirements, except for one small additional function. Which of the following is the best approach if the business needs to modify a document or folder attributes before a record is saved?

- A. Replace the Client for Windows with the Document Manager client.
- B. Use the User Exit capabilities of the Client for Windows.
- C. Write the new function in Java.
- D. Write a separate program to achieve the functionality using the Client for Windows programming interface.

Answer: B

QUESTION NO: 17

A new user has just been added to the Content Manager system. The administrator wants to assign this userid a privilege set in an already existing access control list. The userid is not shown in the access control list modification panel. Which of the following is the most likely reason for this?

- A. The password for the newuserid is expired immediately, and therefore, this userid cannot be accessed.
- B. The access control list is already in use and cannot be modified anymore.
- C. Theuserid has an assigned privilege set which includes the ItemSuperAccess privilege.
- D. The Content Manager System Administration client needs to be restarted after a userid is created to refresh the cache.

Answer: C

QUESTION NO: 18

A company is planning a DB2 Content Manager system for its accounting and human resource departments. One of these departments resides at a remote location. Human resource personnel only access human resource records. Most of the time, accounting department personnel only access accounting records. On occasion, some accounting department personnel have to access a few human resource records for a short period of time several times a day. To have the best response time and the least system overhead, how should the system be implemented?

- A. One resource manager located within each department and implement resource manager LAN cache
- B. One centrally located resource manager to manage both accounting and human resource records
- C. One resource manager located within each department without using resource manager replication or LAN cache
- D. One resource manager located within each department and implement resource manager replication

Answer: A

QUESTION NO: 19

When a connection to a pre-existing Content Manager database server is being defined during an installation of a new administrative client, what will happen if the schema name is omitted or typed incorrectly?

- A. The administrative client will fail to start.
- B. The System Administration client list of servers will appear empty.
- C. The installation process will create a default schema.
- D. During startup the administrative client will ask the user to define a schema since it was missing during installation.

Answer: B

QUESTION NO: 20

A company wants to store its Content Manager documents on hard disk for three months, then migrate the documents to Tivoli Storage Manager (TSM). In addition to configuring TSM, which of the following is required for this to function?

- A. TSM client APIs must be installed on the library server machine.
- B. TSM server must be installed on the library server machine.
- C. TSM server must be installed on the resource manager machine.
- D. TSM client APIs must be installed on the resource manager machine.

Answer: D

QUESTION NO: 21

To show a display name in Chinese for an item type in a working eClient environment, which TWO of the following actions need to be performed?

- A. Modify languageMapping.properties file.
- B. Modify WebSphere configuration.
- C. Modify the item type definition.
- D. Modify IDM.properties file.
- E. Modify IBMLanguages.ini file.

Answer: A,C

QUESTION NO: 22

In a system that uses DB2 Information Integrator for Content and Workflow, how can a user be deleted from Workflow that has already been deleted in DB2 Information Integrator for Content?
