Exam 00M-513

Power Systems with AIX Technical Sales Professional - v2

Version: 6.1

[Total Questions: 46]

Question No : 1

Which of the following is a POWER7 workload-optimizing feature?

- A. FFDC
- B. ASMI
- C. MinCore
- D. TurboCore

Answer: D

Question No : 2

Which tool can be used in the sizing process to provide templates for workloads?

- A. WLE
- B. TDA
- C. SPT
- D. PM for Power Systems

Answer: C

Question No : 3

Which statement for IBM POWER7 EnergyScale Enhancements is true?

- A. Smart Fan Control regulates fan speeds based on CPU workload.
- B. TPMD will allow POWER7 cores to "Over clock" if workload demands are present.
- C. TPMD Hardware is part of the base hardware configuration for enterprise servers only.
- D. Express servers need to be plugged into an IPDU extract power consumption, inlet and exhaust temperature data.

Answer: B

Question No : 4

What is an expected output in the process of sizing a new system for a customer?

- A. Storage space requirements
- B. Expected hardware requirements
- C. Expected growth in data size
- D. Pricing and budget constraints

Answer: C

Question No : 5

If a customer wanted to change the Integrated Virtual Ethernet adapter (IVE) currently installed in their Power 710 or Power 730 server, which option is valid?

- A. Order a different one later with MES order
- B. Use DLPAR and add the new card to the server.
- C. Run the AIX "rmdev" command, followed by the "cfgmgr" command.
- D. The card is hot-swap, so they could remove the current card and replace it with their new choice without powering down the server.

Answer: C

Question No : 6

Which extension of IBM Systems Director makes it easier to create, update and verify AIX configuration properties across multiple systems?

- A. AIX 7 Profile Manager
- B. Active Energy Manager
- C. VMControl Express Edition
- D. Workload Partitions Manager

Answer: A
