QUESTION NO: 6

How can you be sure to access a specific data source in a default Oracle BI Applications installation for users working from a client machine? Assume that log level 2 has been enabled.

- A. With log level 2 or higher enabled in the NQsConfig.ini, you can check the SQL from the query log of a specific Answers request. Read the SQL and check the connection pool(s) used and the data source name(s).
- B. The only data source in a standard BI Applications installation is the data warehouse. This source is defined in DAC in the Setup View under Physical Data Sources. You can also check the (native) connection credentials.

- C.** Sources can range from data warehouse to OLTP systems. Their connections are named inconNECTION pools in the BI repository. Using these connection names you can check the (native) connection credentials.
- D.** All physical connections are defined in Informatica Powercenter Repository Manager. Log in and check all connection credentials.
- E.** Users can log in to Answers, the BI repository, DAC or Informatica to check connection credentials and data source names.

QUESTION NO: 8

A new source is available containing several big tables with over 2 million rows of data. Some of this data is needed in Oracle BI analysis, combined with existing data sources. What are your options to enable this combined analysis?

- A.** Analyze the needed data and needed granularity. If applicable create aggregation tables and partitioned tables in the source database. Apply a type 2 customization in Informatica PowerCenter and modify the DAC with appropriate objects. Model the BI repository with the new data warehouse objects and enable aggregate navigation and partition navigation. Enable cross analysis in the logical layer. Use simple requests and analyze the request performance on the new data.
- B.** Apply a type 2 customization in Informatica PowerCenter to include the necessary data warehouse objects and modify the DAC with appropriate objects. Model the BI repository with the new data warehouse objects and enable aggregate navigation and partition navigation.
- C.** Apply a type1 customization in Informatica PowerCenter to include the necessary data warehouse objects and modify the DAC with appropriate objects. Model the BI repository with the new data warehouse objects and enable aggregate navigation and partition navigation. Enable

cross-analysis in the logical layer.

D. Analyze the needed data and needed granularity. If applicable create aggregation tables and partitioned tables in the source database. Apply a type 1 customization in Informatica PowerCenter and modify the DAC with appropriate objects. Model the BI repository with the new data warehouse objects and enable aggregate navigation and partition navigation.

E. Normalize the new data source into smaller tables and apply a type 2 customization in Informatica PowerCenter. Apply changes in DAC to read the new source data and have execution plans load the needed data into the data warehouse. Model the BI repository with the new data warehouse objects and enable aggregate navigation and partition navigation. Enable cross-analysis in the logical layer.

F. Normalize the new data source into smaller tables and apply a type 1 customization in Informatica PowerCenter. Model the BI repository with the new data warehouse objects and enable aggregate navigation and partition navigation. Enable cross-analysis in the logical layer.
