Exam 700-280

Email Security for Field Engineers

Version: 6.0

[Total Questions: 64]

Question No : 1

By default, how do Outbreak filters avoid quarantining false positives?

- A. False positives do not occur as the Anti-Virus engine will check the signature against the incoming mail. Only positive matches against the signature are quarantined for checking later on.
- B. False positives are released as updates provide a better description of suspected attachment.
- C. Positive matches are not quarantined. They are dropped.
- D. All false positives must be quarantined until a Virus signature is received so that they can be checked.

Answer: B

Question No : 2
