

IBM Business Process Manager Advanced V7.5, Integration Development

Version: 6.0

[Total Questions: 56]

http://www.maitiku.com QQ:860424807

Question No:1

An integration developer is testing the process shown in the followingexhibits.

	ProcessA
	🖸 Interface Partners 🖗 🕷
Catch run	ntimeFailure
Receive faults	Reference Part 💠 🕷
	💗 Variables 🛱 🎸 🕂 🕷
	input1
SnippetA	output1
Catch4	aString
📲 LogSnipp	et 🛛 🛞 Correlation Sets 🔶 🕷
Reply	
NOTE: - input1, aString, and output1 are string variables - aString and output1 are initialized to "ORIGINAL"	

🔁 Receive - Receiv	e				
Description	Partner:*	Component1In	terface Browse		
Details	 Interface:*	Component1In	erface		
Server	Operation:*	operation1	•		
Authorization	📕 🗖 Use data turo	e variables mapping			
Exit Condition		s variables mapping			
Correlation		Name	Туре	Store	into Variable
Environment	DI Inputs	input1	string		input1
Event Monitor			Sung	7	mpdex

Description	O ⊻isual ⊙ Java
Details	/*@bpe.readOnlyVariables names="aString"*/
Server	output1 = "MODIFIED";
Administration	aString = "MODIFIED"; if (input1.length() != 0) {
Exit Condition	<pre>throw new IllegalArgumentException();</pre>
Performance	
Expiration	
Environment	
Event Monitor	
Global Event Settings	

Description	O Visual O Java
Details	System.out.println("output1="+output1+" :: "+
Server	"aString="+aString);
Administration	
Exit Condition	
Performance	
Expiration	
Environment	
Event Monitor	
Global Event Settings	

If the integration developer starts an instance of the ProcessA process with an input of "HELLO", which of the following strings will the LogSnippet snippet write to System.out?

- A. output1=ORIGINAL :: aString=ORIGINAL
- B. output1=ORIGINAL :: aString=MODIFIED
- C. output1=MODIFIED :: aString=ORIGINAL
- D. output1=MODIFIED :: aString=MODIFIED

Answer: C

Question No:2

An integration developer has developed the following business process, as shown in the exhibit:

IBM A2180-270 : Practice Test

	eive Choice
🖹 delivered	🖹 received
	-
↓ Invoke1	Assign2
_	
Snippet1	🖨 Invoke2
	ataMap

The invoke activitiesInvoke1 and Invoke2 are synchronous invocations and execute in a few seconds. A compensation handler needs to be defined for Snippet2 following a business action from the customer. The customer considers performance to be a key requirement. How would the integration developer implement these requirements? The business process needs to be a:

- A. long-running process because of the required fault handler.
- B. long-running process because of the required compensation handler.
- **C.** microflow because no human tasksare required.

D. microflow for best performance as every invoke activity uses synchronous invocation and executes quickly.

Answer: B

Question No : 3

IBM A2180-270 : Practice Test

An integration developer needs to check which Common Event Infrastructure (CEI) events have been generated for a business process and review the information contained inside each event. Where will the integration developer find this information?

A. In the Common Base Event browser application.

B. In the monitoring widgets in Business Space.

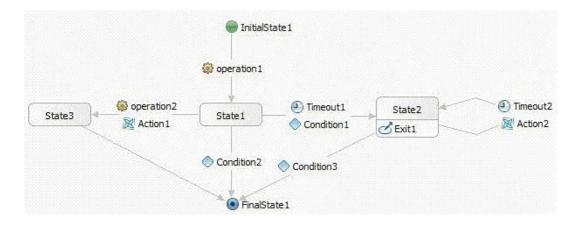

C. In the administrative console -> Service Integration -> Common Event Infrastructure -> Event Service

D. In the Business Process Choreographer Explorer -> Views tab -> Process Instances -> Events generated

Answer: A

Question No:4

An integration developer has configured a business state machine, as shown below:

What behavior will the integration developer observe when executing the flow?

A. If Condition3 is false, then Exit1 will execute after Timeout2 expires.

B. If Condition1 and Condition2 are both true, then aruntime exception will be thrown.

C. If Condition1 is false, then Timeout1 will not be evaluated.

D. If Condition1 and Condition2 are both false, then operation2 will be called by the business state machine.

Answer: A

Question No: 5

An integration developer has configured a BPEL business process for a customer, as shown below:

💥 ForEach		
Service 1		
2		
- P		
Execution of iterations: 🔿 Sequential 💿 Parallel		
ndex-Variable Name: Index		
 Iteration 		
Define the bounds of the range to iterate over by specifying an iteration type.		
Type: Expression		
Start Expression:	End Expression:	
Start Expression: Expression Language: Java	End Expression: Expression Language:	Java
	Expression Language:	
Expression Language: Java 💌 Expression Type: 🔿 Visual 💿 Java	Expression Language: Expression Type: 🔿 Visu	
Expression Language: Java 💌 Expression Type: 🔿 Visual 💿 Java	Expression Language: Expression Type: 🔿 Visu	
Expression Language: Java 💌 Expression Type: 🔿 Visual 💿 Java return min;	Expression Language: Expression Type: 🔿 Visu	
Expression Language: Java 💌 Expression Type: 🔿 Visual 💿 Java	Expression Language: Expression Type: 🔿 Visu	

Assume that max is greater than min. What should the integration developer take into account when implementing this for each loop?

A. There must be an array associated with the for each loop.

B. It is possible to exit the loop before Index is equal to max.

C. The values of min and max cannot be changed once the for each activity begins.

D. If the scope inside of the for each activity is set to isolated, then the activities will run sequentially.

Answer: D

Question No : 6

A client requires that a new BPEL process return a fault message to the requester in case the process does not complete correctly. The integration developer has added a fault handler to the process to catch all exceptions. How should the integration developer return the fault message? A. Use a throw activity of a business fault.

B. Use a reply activity using a standard fault.

C. Use a reply activity using a business fault defined in the interface.

D. Use a rethrow activity in the fault handler on the process scope using a fault defined in the interface.

Answer: C

Question No:7

An integration developer needs to rewrite business rule logic written in Java using a business rule component. The integration developer has implemented the selector shown in the exhibits below.

		0 🛃 JavaComponent
SelectorExport	🕖 🚭 Selector 🔪	[]
		🕖 🔚 BusinessRuleComponent

•Interfaces 🛛 🔶 🕱	Default Component Enters	CA Component	
▼ (I) SelectorInterface	Start Date	End Date	Component
to Secced Interface	Jan 1, 2012 12:00 AM	Dec 31, 2012 12:59 PM	JavaComponent
	Jan 1, 2013 12:00 AM	🔲 Dec 31, 2013 12:59 PM	BusinessRuleComponent
	Selection Criteria Current o	late	

What behavior will the integration developer observe with the configured selector?

A. The module will fail to compile because there is no wiring between the selector and the destination components.

B. The module will fail to compile because the destination of the selector can only be rule logic or decision table.

C. The runtime exception will be thrown because there is no default component configured.

D. The runtime exception willbe thrown if the date when the selector is invoked does not fall in any of the specified date ranges.

Answer: D

Question No:8

An integration developer has configured a BPEL business process for a customer, as shown below:

La seconda de	Build Activities	Properties 🕄	Service 1	Server Logs 해상 Servers	
The second s		Service2	Br	owse	
Description	Partner:*				
Description Details	Partner:* Interface:*	Service2			
Description Details Authorization		Service2 operation2	×		
Description Details	Interface:* Operation:*	and the second			
Description Details Authorization	Interface:* Operation:*	operation2	Type	Store into Variable	

What should the integration developer consider when implementing this flow?

A. An Otherwise element must be added to the Choice activity.

B. A Timeout element must be added to the ReceiveChoice activity.

C. It is possible for Snippet1 and Snippet2 to run concurrently in the same instance of the process.

D. If Snippet1 is invoked in an instance of the process, that instance will not receive messages sent to the Service2 interface.
