Symantec

Exam ASC-094

ASC Storage Management Assessment

Version: 6.0

[Total Questions: 77]

Question No : 1

What should a consultant recommend to a customer as a post-engagement service offering?

A. ongoing tech support
B. additional licenses
C. new hardware and software
D. six monthly health check

Answer: D

Question No : 2

A customer has asked you to create a custom report using the CommandCentral Enterprise Reporter 'Host Storage Allocation' Package. Which type of reports will you be able to create using this package?

A. Reports showing filesystem used and unused capacity by hosts
B. Reports showing the number of switch ports allocated to hosts
C. Reports showing the total amount of LUN storage allocated directly to a host
D. Reports showing the total used and unused capacity for databases

Answer: C

Question No : 3

Which two aspects of a Storage Area Network (SAN) design impact fabric latency most? (Select two.)

A. number of switches and fabrics configured in the SAN
B. hop count between the host and storage devices
C. number of Inter Switch Links (ISL) configured between the SAN switches
D. number of SAN connections between the host and switch
E. distance between the host and storage devices

Answer: B,E

Question No : 4

Which feature of Storage Foundation 5.1 Enterprise should be deployed to optimize the usage of Solid State Devices (SSD)?

A. Dirty Region Logging (DRL)
B. Disk Group Split and Join (DGSJ)
C. Dynamic Storage Tiering (DST)
D. Fast Mirror Resync (FMR)

**Answer: C**

Question No : 5

When configuring mirrored volumes, which Volume Manager component should be deployed to optimize the recovery of a plex after it is re-attached to the volume?

A. Data Change Map (DCM)
B. Date Change Object (DCO)
C. Dirty Region Log (DRL)
D. File Change Log (FCL)

Answer: B

Question No : 6

Refer to the exhibit.

Which of these configurations provides the least cost redundancy solution to protect the systems from application downtime in the event of a single path failure to the storage array?

A. Configuration A
B. Configuration B
C. Configuration C
D. Configuration D

Answer: B

Question No : 7

A customer has a database that is running out of space, largely due to one tablespace that is archived to each month. The data in this tablespace is still frequently used for reports, but it does not need the fast response times that the rest of the database needs, so the customer intends to utilize some slower storage in the array that they are using. Which product/feature should the administrator recommend they use?

A. extended copy feature of VxVM
B. sparse plex
C. DST
D. Enterprise Vault

Answer: C

Question No : 8

What are two benefits of using Symantec's Service Delivery Methodology? (Select two.)

A. reduces the risk of project scope creep
B. minimizes project risk
C. provides proven delivery methodology
D. uses industry best practices
E. increases customer satisfaction

**Answer: C,D**

Question No : 9

A customer is using VVR 4.1 to replicate data from their main site to a DR site. How would you recommend they upgrade to 5.1?

A. Upgrade DR site to 5.1, switch application to DR site and upgrade main site to 5.1, after which replication will continue automatically.
B. Upgrade DR site to 5.1, switch application to DR site and upgrade main site to 5.1 and resynchronize data in VVR by performing an initial synchronization method.
C. Perform a VVR check point at the main site and then upgrade DR site, switch application to DR site and upgrade main site to 5.1 and then resume replication using the check point.
D. Bring down application and upgrade both sites to 5.1.

Answer: A

Question No : 10

Refer to the exhibit.

This illustration is an example of which RAID technology?

A. RAID S
B. RAID 1+0
C. RAID 0+1
D. RAID 5

Answer: D

Question No : 11

What is the Symantec recommended practice to perform pre-installation checks?

A. Validate all the pre-requirements as per the installation guide and Hardware Compatibility Matrix
B. Download a run the data collector from the Symantec Operations Readiness Tools website to perform an Installation and Upgrade Assessment
C. capture all prerequisites in the design document and ensure that the customer completes them
D. use VRTSexplorer script to collect the data and verify the compatibilities

Answer: B

Question No : 12

When implementing CommandCentral Management Server, which ports must be opened on the network for the server to communicate with CommandCentral Managed Hosts?

A. 9400
B. 8443
