Question No : 2

PureData System for Transactions top of rack switch supports different connection speeds for integration into the customer network. What are the different connection speeds supported?

- A. 1 Gb SFP Fiber, 1 Gb SFP Copper
- B. 10 Gb SFP+ Fiber, 10Gb SFP+DAC
- C. 1 Gb SFP Fiber, 10 Gb SFP+ Fiber. 10 Gb SFP+DAC
- D. 1 Gb SFP Fiber. 1 Gb SFP Copper. 10 Gb SFP+ Fiber, 10 Gb SFP+DAC

Answer: C**Question No : 3**

Which two items regarding PureData database-level backups are true?

- A. Database backups cannot be performed manually.
- B. Managed either manually or automatically through the System Console.
- C. Managed either manually or automatically through the Workload Console.
- D. You must configure Tivoli Storage Manager to enable database backups.
- E. The backup image includes DB2 Registry values, customized OS users and groups.

Answer: D,E

Question No : 4

Which command can be used by a database administrator to display the status of a pureScale system?

- A. db2instance-list
- B. db2cluster-cfs-list
- C. db2 list node directory
- D. db2cluster -cm -list -alert

Answer: A

Question No : 5

Which operation can be used to stop member 0 with no impact on the running transaction?

- A. db2stop force
- B. db2stop quiesce
- C. db2stop member 0 force
- D. db2stop member 0 quiesce

Answer: D

Question No : 6

You need to grant user jane the ability to create new databases on an instance db2sdin9. Which statement describes the correct procedure to grant user jane this access?

- A. Grant jane the "Create new patterns" right under Workload Management.
- B. Grant jane the "Manage all databases and client configurations (Full permission)" rights under Workload Management.
- C. Bring up the list of instances. Highlight the instance db2sdin9 and add user jane to the list of "Access granted to" users.
- D. Bring up the list of instances. Highlight the instance db2sdin9 and add user jane to the list of "Instance available to" users.

Answer: C

Question No : 7

When looking up the information for the storage nodes, what does the location information show?

- A. The topology map of the storage network.
- B. The city and state the storage unit is installed in.
- C. The port on the network switch the storage unit is connected.
- D. The rack and physical location within that rack in rack unit numbers.

Answer: A

Question No : 8

Which is a supported target for database backups?

- A. Local Disk
- B. NetBackup
- C. Named Pipes
- D. Tivoli Storage Manager

Answer: D

Question No : 9

Which list defines features available with the Database Performance Monitor?

- A. Instance alerts, database alerts, and system templates for monitoring
- B. Instance alerts, user-defined alerts and system templates for monitoring
- C. Database alerts, user-defined alerts, and system templates for monitoring
- D. Instance alerts, database alerts, user-defined alerts, and system templates for monitoring

Answer: B

Question No : 10

A member's current state is "WAITING_FOR_FAILBACK". What does this state imply?

- A. The member is quiesced.
- B. This member is waiting for failover to complete.
- C. This member is waiting to restart on its home host.
- D. Another member is waiting to start on this member's host.

Answer: C

Question No : 11

When creating a database workload standard, users must follow the specified file directory
