## Exam C9550-271

### IBM Business Process Manager Advanced V7.5.1, Deployment

Version: 6.0

[ Total Questions: 49 ]

**Question No : 1**

Users are reporting a slow response time when performing queries on business process instances and human tasks in a production environment. On examination of the environment, it is discovered that this is due to the high number of process instances and human tasks that are being returned by searches, most of which are not required by the user, and are in turn increasing load on the servers. What should the deployment professional create to improve response times and reduce server load.

- A. A ad-hoc report in Process Portal
- B. A customized widget in Business Space
- C. A saved search in the Process Inspector
- D. A customized view in the Business Process Choreographer explorer

**Answer: D**

**Question No : 2**

A bank has deployed a loan application business process that interacts with an external credit check service using a web service import binding. After deployment of the application, the deployment professional notices that a number of failed events are generated from the credit check service endpoint. After examining the failed events, the deployment professional determines the port number for the credit check service is incorrect and must be updated. What can the deployment professional do to fix this problem?

- A. Use the administrative console and update modules import binding.
- B. Use the administrative console and update modules import binding and restart the module.
- C. Manually edit the wsdl file since the endpoint address cannot be updated using the administrative console.
- D. Send the application back to development as the import binding endpoint address cannot be dynamically updated.

**Answer: B**

**Question No : 3**

A deployment professional needs to install a snapshot to an offline server. The deployment professional built the package and is ready for installation. What should the deployment

professional run next to complete the deployment?

- A. serviceDeploy and retrieveProcessAppPackage.
- B. retrieveProcessAppPackage and installProcessAppPackage
- C. serviceDeploy, retrieveProcessAppPackage, and installProcessAppPackage
- D. retrieveProcessAppPackage, serviceDeploy, and installProcessAppPackage

**Answer: B**

**Question No : 4**

After a successful deployment of the event service and its associated resources, a deployment professional needs to set up the Common Event Infrastructure (CEI) application in a clustered environment. To do so, which one of the following utilities should the deployment professional execute through the wsadmin tool?

- A. deployEventService
- B. deployEventServiceMdb
- C. enableEventService
- D. setEventServiceJmsAuthAlias

**Answer: A**

**Question No : 5**
