Topic 0, A

A

Question No : 1 - (Topic 0)

Which droplet renders a subset of the elements in an array?

- A. Range
- B. Subset
- C. ForEach
- D. ForEachRange

Answer: A**Question No : 2 - (Topic 0)**

You want to remove middleName from the user item descriptor in the Profile Repository and add a boolean over18 property. What should you do in your custom userProfile.xml file?

- A. create a user item-descriptor tag with xml-combine="replace"
create a middleName property tag with xml-combine="remove"
create an over18 property tag with xml-combine="append"
- B. create a user item-descriptor tag with xml-combine="append"
create a middleName property tag with xml-combine="remove"
create an over18 property tag with xml-combine="replace"
- C. create a user item-descriptor tag with no xml-combine declaration
create a middleName property tag with xml-combine="remove"
create an over18 property tag with xml-combine="append"
- D. create a user item-descriptor tag with no xml-combine declaration
create a middleName property tag with xml-combine="replace"
create an over18 property tag with xml-combine="append"

Answer: C**Question No : 3 - (Topic 0)**

Which two are required to use Dynamo's targeted email functionality to send a mass mailing with each message containing a different set of targeted content specific for each user? (Choose two.)

- A. a scenario
- B. a repository
- C. a page template
- D. a schedulable component

Answer: B,C

Question No : 4 - (Topic 0)

Which two statements are true if a repository item type T has a property P that has the cascade="update" attribute set? (Choose two.)

- A. Property P can be defined as either a repository item or a Collection of repository items.
- B. The cascade="update" attribute is applied recursively to any properties in the items referenced by property P.
- C. Anytime that a repository item of type T is updated, all corresponding items referenced by property P are updated.
- D. Anytime that a repository item of type T is added to the repository, the corresponding items referenced by property P are also added to the repository.

Answer: A,D

Question No : 5 - (Topic 0)

What is the primary purpose of the Java Message Service (JMS)?

- A. to provide a uniform method for sending email
- B. to allow asynchronous, decoupled communications
- C. to use a database to queue messages regardless of type
- D. to create a publish-subscribe model for synchronous messages

Answer: B

Question No : 6 - (Topic 0)

Click the Exhibit button.

Given the CONFIGPATH and properties files:

CONFIGPATH: <atg-dir>\Dynamo\MyProjectv1\config; <atg-dir>\Dynamo\MyProjectv2\config; <atg-home>\localconfig

What will be the final configured values of the name and age properties?

```
<atg-dir>\Dynamo\MyProjectv1\config\Person.properties:  
name=Joe  
age=32
```

```
<atg-dir>\Dynamo\MyProjectv2\config\Person.properties:  
name=Mary  
age=34
```

```
<atg-home>\localconfig\Person.properties:  
name=Joe
```

- A. name=Joe, age=32
- B. name=Joe, age=34
- C. name=Mary, age=34
- D. name=Joe, age=null

Answer: B

Question No : 7 - (Topic 0)

What is the easiest way to implement a Schedule if a scheduled service is required to run twice each Monday?

- A. PeriodicSchedule
- B. RelativeSchedule
- C. CalendarSchedule
- D. RecurrentSchedule

Answer: C

Question No : 8 - (Topic 0)

What are two advantages of using Item Descriptor Inheritance over independent item descriptors in a repository definition? (Choose two.)

- A. Duplicate data across different tables can be avoided.
- B. The number of database tables is reduced, simplifying queries.
- C. Item descriptors can inherit properties from multiple parent sources.
- D. Queries for items with common attributes can be created more easily.

Answer: A,D

Question No : 9 - (Topic 0)

Which method of the ProfileFormHandler should you override to implement code that updates a custom statistics data store whenever a new user successfully registers?

- A. createUser()
- B. handleCreate()
- C. postCreateUser()
- D. createUserSuccess()

Answer: C

Question No : 10 - (Topic 0)

Which two features describe an SQL repository? (Choose two.)

- A. An XML file maps database structures to objects.
- B. All SQL queries must be specified in the configuration.
- C. SQL Repositories that store files should not exceed 1,000 files.
- D. Transient properties can be defined that are not stored in a database.

Answer: A,D

Question No : 11 - (Topic 0)

What is a characteristic of a transient Repository Item property?

- A. It holds repository meta-data.
- B. It is not stored in the database.
- C. It is not cached in the repository.
- D. It is stored in an auxiliary database table.

Answer: B

Question No : 12 - (Topic 0)

Given the following code fragment:

```
import atg.repository.*;

...

public void MyMethod(RepositoryItem item) {

    String name = (String) item.getPropertyValue("name");
```

Which two statements are true? (Choose two.)

- A. item is an instance of the RepositoryItem class.
- B. item is an implementation of the RepositoryItem interface.
- C. The item's ID is obtained by invoking item.getRepositoryId().
- D. The name property of the item is changed to "Robert" by invoking item.setPropertyValue("name", "Robert").

Answer: B,C

Question No : 13 - (Topic 0)

Which two statements are true if a content repository stores meta-data in an SQL database and content in a filesystem? (Choose two.)

- A. Two XML files describe the repository.
- B. File content is represented by a user-defined property.
- C. The repository can have only one content item descriptor.
- D. Targeting rules can be based only on the information in the SQL database.

Answer: B,D

Question No : 14 - (Topic 0)

Which interface should you use to retrieve a repository item for update when you have a
