- A. Journaling File System
- B. Windows Journal File
- C. Windows Change Journal
- D. Advanced File System AdvFS

Answer: C

Question No : 8

Which data characteristic best defines the most achievable data compression ratio?

- A. file type
- B. location
- C. size
- D. block size

Answer: A

Question No : 9

HP Data Protector Software 6.1 introduces Change Log Provider (CLP) integration in addition to the existing Enhanced Incremental Volume Backup Disk Agent (EI VBDA). How do these two methods differ when performing incremental backups with millions of files and the file change rate is very low?

- A. CLP uses file tree walk to generate a list of objects to be backed up.
- B. EI VBDA functionality resolves these issues by reading a local database on the client system.
- C. EI VBDA helps incremental backups to complete in a much shorter amount of time.
- D. CLP significantly improves performance under these circumstances.

Answer: D

Question No : 10 DRAG DROP

Click the Task button. Place the HP Data Protector Software restore dataflow and processes in the correct order.

HP HPO-M36 : Practice Test

Drag and Drop the boxes.

Place the HP Data Protector Software dataflow and processes in the correct order.
