

# HP

## Exam HP0-M41

### HP Universal CMDB 9.x. Software

Version: 6.0

[ Total Questions: 63 ]

**Question No : 1**

What does the IT Universe model represent?

- A. the structure of all CI Types and their relationships
- B. the sets of views defined in the CMDB environment
- C. the structure of all CIs and CI Types
- D. the data of all CIs and CI Types in the CMDB

**Answer: A**

**Question No : 2**

What are the main components of the Data Flow Management architecture? (Select three.)

- A. IP range
- B. servers
- C. discovery adapters
- D. domain and credentials
- E. database
- F. data flow probe

**Answer: B,E,F**

**Question No : 3**

What are the roles of CMDB database schemas? (Select two.)

- A. to store only the system-wide and management-related metadata for the UCMDB environment
- B. to store configuration information that is gathered from the various CMDBs and from the UCMDB application
- C. to store CI changes over a time range
- D. to store saved snapshots of the views
- E. to store the information that is gathered from third-party applications and tools

**Answer: B,E**

**Question No : 4**

What are best practices for a UCMDB High Availability deployment? (Select three.)

- A. UCMDB services run on all the servers in the cluster, but customer components are only active on the active server.
- B. UCMDB services run on all the servers in the cluster and customer components are active on all the servers.
- C. The load balancer should be configured as sticky by session.
- D. The load balancer should be configured as sticky by IP.
- E. The session keep alive address string contains a ClusterId parameter.
- F. The session keep alive address string contains a ServerId parameter.

**Answer: A,C,E**

**Question No : 5**

What are the supported operating systems for the UCMDB application? (Select three.)

- A. Sun SPARC Solaris 10
- B. Windows 2003 Enterprise (64 bit)
- C. Windows 2008 Enterprise (64 bit)
- D. SUSE Linux 11 Enterprise (64 bit)
- E. Windows 2000, 2003/2008 (32 bit)
- F. Red Hat Linux 5 Enterprise/Advanced (64 bit)

**Answer: B,C,F**

**Question No : 6**

Which statement correctly defines the Any option in the scope of an impact rule?

- A. Every CI for the trigger must match the condition.
- B. At least a single CI in the trigger matches the condition.
- C. No CIs for the trigger match the condition.
- D. A percentage of CIs in the trigger match the condition.

**Answer: B**

**Question No : 7**

Which statement is true about state and status in UCMDB?

- A.** The state is an indicator of whether the rule is used for operational or change and the status is the value for the impact analysis.
- B.** The state is a Boolean value used to trigger an impact analysis rule and the status is the result of the impact analysis rule execution.
- C.** The state is the indicator for the progress of the impact analysis rule and the status indicates if the rule is on or off.
- D.** The state is the value for the impact analysis stored in an attribute of the CI and the status is a visual display of the state in a topology map.

**Answer: D**

**Question No : 8**

Which statement is true about trigger and impacted nodes?

- A.** The trigger node starts a timer event; the impacted node receives the results from the event.
- B.** The trigger node defines the impact; the impacted node shows how many nodes are impacted.
- C.** The trigger node is the starting point for the impact rule; the affected node is the root cause.
- D.** The trigger node is the cause; the impacted node is the effect in a cause and effect relationship.

**Answer: D**

**Question No : 9**

Which option displays the status in the view when you run an impact analysis rule?

- A.** Run Impact Analysis - Show map
- B.** Run Impact Analysis - Show in views
- C.** Run Impact Analysis - Generate report
- D.** Run Impact Analysis
