Exam HP2-H09

Selling HP Thin Clients

Version: 6.1

[Total Questions: 50]

Question No : 1

How does thin computing address education-specific challenges?

- A. by enabling the school IT department to run applications internally
- B. by allowing school administrators to pay for actual application usage on a subscription basis
- C. by increasing interactive learning while budgets are being cut
- D. by automatically implementing software upgrades and patches to keep content current

Answer: C

Explanation: The question is asking about education specific challenges in terms of thin computing. Thin clients are cheap and easy to use, hence, option C is the right answer.

Question No : 2

How should you present thin computing to your customers?

- A. as a set of product offerings
- B. as a user-customizable solution
- C. as a full-function computer infrastructure
- D. as a business solution

Answer: D

Question No : 3

Where do the data and applications reside in a thin client solution?

- A. on the Internet
- B. on a cluster of servers
- C. on the client
- D. in the data center

Answer: B

Question No : 4

Which advantages do thin clients offer in the financial industry?

- A. Large computational capabilities support complex financial modeling.
- B. Centralization of data in the data center satisfies regulatory and security requirements.
- C. Support for rich multimedia applications provides real-time performance enhancements.
- D. Instantaneous failover capabilities ensure maximum uptime.

Answer: B

Question No : 5

How does thin computing help a customer who is facing increasing costs for hardware, software updates, and maintenance?

- A. Thin client solutions eliminate the cost of licensing and patch fixes.
- B. Thin client solutions centralize the update, refresh, and maintenance processes in the data center.
- C. Thin client computing allows enormous computing tasks to be distributed among many computers.
- D. Thin clients allow customers to be responsible for administering their own updates, refreshes, and maintenance.

Answer: B

Question No : 6

Which need would motivate a customer to deploy a client virtualization solution?

- A. to perform massive computational requirements
- B. to eliminate all single points of failure
- C. to reduce desktop deployment costs and simplify management
- D. to provide access for employees anywhere there is Internet connectivity

Answer: C

Question No : 7
